The Spectra LED facial tanner from Ergoline tans your skin gentle but intensive. Did you know a beautiful tan does not need heat? Heat is often equated with tanning, but the opposite is true: excessive heating of the skin triggers a vascular reaction to cool the skin. Blood is drained from the skin, which can lead to a poorer nutrient supply and reduce the tanning reaction.

By reducing the development of heat, Spectra is kind to the skin, increasing the effectiveness of the skin-caring Beauty Light. Because the lighting technology is particularly homogeneous, these tanners deliver a deep, even tan every time. For the best and gentlest tanning experience of all time.
